iBELL Wi-Fi

Your house in real time!

See! Hear! Talk!

The iBELL is, without doubt, in the vanguard of door bell technology.

Despite his name, the iBELL is much more than a door bell. It joins so many features that we almost had to invent a new concept for it. It has characteristics that can be associate with an alarm system, others from mobile communication devices, and many more. After it connects with a wi-fi network allows constant connectivity and interaction with his users. When you associate your mobile phone to this device you can, anytime, anywhere, see what's happening at your door, who's ringing your door bell, give access to your home, all off this remotly, even if you are at the other side of the world. With his motion detection system you can be sure that you will not face any unpleasant surprises.

With the iBELL you can leave your house feeling safe, it's like if you are there at every moment.

Get to know the iBELL amazing features

- | | |
|-------------------|-----------------|
| ① Movement Sensor | ⑤ Speaker |
| ② Camera | ⑥ LED "flash" |
| ③ Microphone | ⑦ Network light |
| ④ Bell Ring | ⑧ Power light |

1. Movement Sensor

With this sensor, the iBELL can detect if there is someone or something at your door, and through his internet connection he can send you the warning about it. It's helps you feel safe about the security of your home.

2. Camera

The iBELL camera is a essential, because it will be yours eyes any time. Every time you want to see your front door you can. Every time you receive a notification it will have a picture, if someone rings the bell, for example, you will receive the notification on your mobile phone with a picture of the precise moment that that person touched the ring button.

3. Microphone

You can communicate with the people at your door, just by pressing a button you can, even at the other side of the world, talk with who ever is at your door.

4. Bell Ring

This button is the core of all the functions, by pressing it all the other iBELL features are activated. Pressing this button opens a range of options. If you want, you can, for example, open the door remotely, if some one want to enter your home for some reason.

5. Speaker

It allows you to be heard at the other side of the line. It's a two way communication, you can ear, talk and see, the persons who's at your door can ear and talk but they can't see

6. LED Flash

This LED is used when you want, for example, at night it helps you see better who's at your door.

7. Network light

This light gives you the status of the iBELL internet connection.

8. Power light

The Power light should be always on, it let's you know that the iBELL is properly working.

Receive **instant** notifications about the **security** of your home.

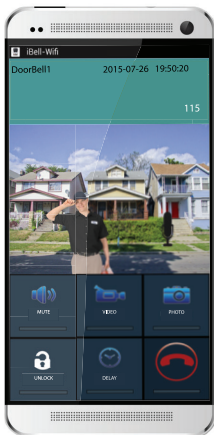

The iBELL APP was developed so that it can be used by everyone, regardless the age, the sex, the education... The simplicity allows it to be very flexibly used. You can setup all the settings accordingly with what you want and expect from your iBELL. You can set the delay time of the calls, you can answer them anywhere, you can give access to your home when needed, etc. By being connected to all 4 users, the connectivity is constant and continual. And you can even establish the hierarchy of the users, giving priority to the users you think are most important.

Through this APP you control all the iBELL features and settings quickly and easily.

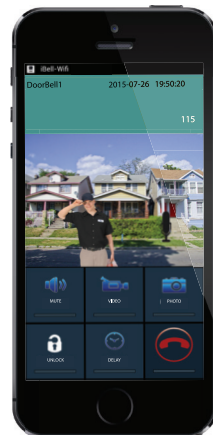

Android

The App is available for every version of the Android Smartphones

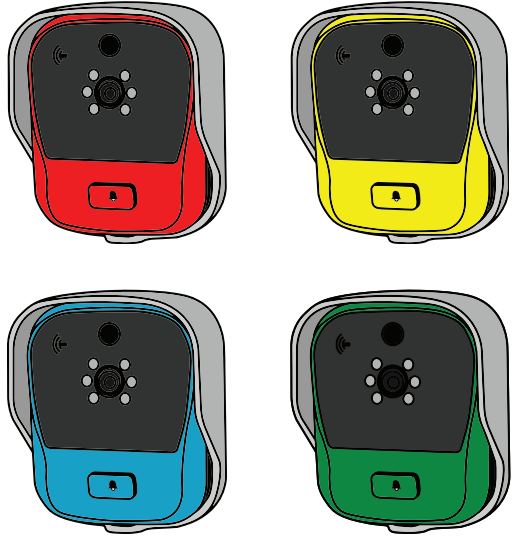

Apple iOS

Available for iPhone, iPad and iPod Touch. Supports the last iOS version

We provide the iBELL in more than one color. You can select from five possible choices, the one that best fits you and your home. The choices vary between the four primary colors, red, yellow, blue and green, plus the white.
