## 1. HS REQUIREMENTS AND CONFORMANCE TEST SPECIFICATIONS TABLE

Harmonized Standard EN 301 489-1 The following technical requirements and test specifications are relevant to the presumption of conformity under article 3.1(b) of the R&TTE Directive					
Technical Requirement reference		Technical Requirement Conditionality			Test Specification
No	Description	Reference: Clause No	U/C	Condition	Reference: Clause No
1	Enclosure of ancillary equipment measured on a stand alone basis	8.2	U		8.2
2	DC power input/output ports	8.3	C	Only where equipment has DC power input and/or output ports	8.3
3	DC power input ports	8.3	C	Only for equipment intended to be used in a vehicular environment and powered from the vehicle power supply	8.3
4	AC mains power input/output ports	8.4	C	Only where equipment has AC mains power input and/or output ports	8.4
5	Harmonic current emission (AC mains input port)	8.5	C	Only where equipment has AC mains power input ports	8.5
6	Voltage fluctuations and flicker (AC mains input ports)	8.6	C	Only where equipment has AC mains power input ports	8.6
7	Telecommunication ports	8.7	C	Only where equipment has telecommunications ports	8.7
8	Radio frequency electromagnetic field (80 MHz to 1 000 MHz and 1 400 MHz to 2 700 MHz)	9.2	U		9.2
9	Electrostatic discharge	9.3	U		9.3
10	Fast transients common mode	9.4	U		9.4
11	Radio frequency common mode	9.5	U		9.5
12	Transients and surges in the vehicular environment	9.6	C	Only where compliance to Directive 2004/104/EC [23] is required	9.6
13	Voltage dips and interruptions	9.7	C	Only where equipment has AC mains power input ports	9.7
14	Surges, line to line and line to ground	9.8	C	Only where equipment has AC mains power input ports and/or telecommunications ports	9.8
15	Broadband electromagnetic interference (emissions) generated by the ESA	B.2.1	C	Only where compliance to Directive 2004/104/EC [23] is required	B.2.1
16	Narrow-band electromagnetic interference (emissions) generated by the ESA	B.2.2	C	Only where compliance to Directive 2004/104/EC [23] is required	B.2.2
17	Immunity of the ESA to transient disturbances conducted along the supply lines	B.2.3	C	Only where compliance to Directive 2004/104/EC [23] is required	B.2.3
18	Conducted disturbances (emissions) caused by the ESA	B.2.4	C	Only where compliance to Directive 2004/104/EC [23] is required	B.2.4

Table 6: Special conditions for EMC immunity tests

Reference to clauses in EN 301 489-1 [1]	Special product-related conditions, additional to or modifying the test conditions in EN 301 489-1 [1], clause 9
9.2.2: Test method; Radio frequency electromagnetic field	<p>Attention: The width of the steps for the test frequency increments is class-dependent:</p> <ul style="list-style-type: none"> <li>- for SRDs of class 1 or class 2, the stepped frequency increments shall be 1 % of the momentary used test frequency;</li> <li>- for SRDs of class 3, the stepped frequency increments shall be 10 % of the momentary used test frequency.</li> </ul>
9.5.2: Test method; Radio frequency, common mode	<p>Attention: The width of the steps for the test frequency increments is class-dependent:</p> <ul style="list-style-type: none"> <li>- for SRDs of class 1 or class 2, the stepped frequency increments shall be 1 % of the momentary used test frequency in the frequency range 5 MHz to 80 MHz;</li> <li>- for SRDs of class 3, the stepped frequency increments shall be 10 % of the momentary used test frequency in the frequency range 5 MHz to 80 MHz.</li> </ul>
9.7.3: Performance criteria; Voltage dips and interruptions	<p>Attention: The performance criteria are equipment class dependent:</p> <p>For a voltage dip corresponding to a reduction of the supply voltage of 30 % for 10 ms the performance criteria CT or CR specified in clauses 6.4 or 6.6 shall apply as appropriate.</p> <p>For a voltage dip corresponding to a reduction of the supply voltage of 60 % for 100 ms the following class-dependent performance criteria shall apply:</p> <ul style="list-style-type: none"> <li>- for transmitters, belonging to class 1 equipment, the performance criteria CT (see clause 6.4);</li> <li>- for transmitters, belonging to class 2 or 3 equipment, the performance criteria TT (see clause 6.5);</li> <li>- for receivers, belonging to class 1 equipment, the performance criteria CR (see clause 6.6);</li> <li>- for receivers, belonging to class 2 or 3 equipment, the performance criteria TR (see clause 6.7).</li> </ul> <p>For a voltage interruption corresponding to a reduction of the supply voltage of &gt; 95 % for 5 000 ms the performance criteria TT or TR specified in clauses 6.5 or 6.7 shall apply as appropriate.</p>

## 1. TECHNICAL INFORMATION OF EQUIPMENT UNDER TEST (EUT)

### 1.1 Identification EUT

Brand name: POLITEC s.r.l.  
 Manufacturer : POLITEC s.r.l.  
 Type of equipment: Microwave access control  
 Model name or No. : MANA DT  
 Part number : id. \*\*\*\*  
 Serial No.: \*\*\*\*\*  
 Derivate Model name or No. : \*\*\*\*\*  
 Country of manufacturer: Italy

### 1.2 Technical data

R&TTE category : Short Range Devices (SRD) and ancillary equipment  
 Equipment Classification (in acc. to Cl. 5.5 of the EN 301 489-1) : Portable or mobile equipment or combinations of equipment, when used in conjunction with a charger powered from the AC mains, shall in addition fulfil the requirements of radio and ancillary equipment for fixed use (see tables 2 and 3 in clauses 7.1 and 7.2 of EN 301 489-1 [1])  

- **5.2 Equipment which can provide a continuous communications link**  
 The provisions of EN 301 489-1 [1], clause 5.2, shall apply.
- **5.3 Equipment which does not provide a continuous communications link**  
 The provisions of EN 301 489-1 [1], clause 5.3, shall apply with the following modification: for equipment type III the manufacturer shall always define the test method(s) for the assessment of the actual level of performance or degradation of performance during and/or after the EMC exposure.
- **5.4 Ancillary equipment**  
 The provisions of EN 301 489-1 [1], clause 5.4, shall apply.

 Category of performance criteria (in acc. to Cl. 6 of the EN 301 489-3) :  

- Performance criteria for Continuous phenomena applied to Transmitters
- Performance criteria for Transient phenomena applied to Transmitters
- Performance criteria for Continuous phenomena applied to Receivers
- Performance criteria for Transient phenomena applied to Receivers
- Performance criteria for ancillary equipment tested on a stand alone basis

 Single or Multiple Unit : Multiple ( TX and RX component)  
 Input current: Max 200 mA TX , 200 mA RX  
 EUT Dimensions : see manufacturer documentation  
 EUT standing: On wall

### 1.3 GSM Technical data

Identification of the module and its characteristics :

<b>MANUFACTURER</b>	POLITEC s.r.l.	
<b>TYPE</b>	Microwave access control	
<b>Banda di frequenze:</b>	24,000 – 24,25 GHz (annex 1 sub-part j)	
<b>Frequency band:</b>		
<b>Frequenza operativa:</b>	24,000 – 24,25 GHz	
<b>Operating frequency:</b>		
<b>Canali:</b>	1	
<b>Number of channels:</b>		
<b>Spaziatura dei canali:</b>	NA	
<b>Channel bandwidth:</b>		
<b>TX canalizzato (banda stretta) :</b>		
<b>TX chanalized (narrow band) :</b>	NA	
<b>TX non canalizzato (banda larga): TX not chanalized (broad band):</b>	TX not chanalized	
<b>Tipo di modulazione :</b>	AM	
<b>Type of modulation :</b>		
<b>Potenza RF di uscita (ERP) :</b>		
<b>RF Power Output (ERP):</b>	19,4 dBm	
<b>Tipologia dell'antenna :</b>		
<b>Type of antenna :</b>	Integral antenna in waveguide	
<b>Guadagno d'antenna:</b>		
<b>Antenna gain:</b>	not applicable	
<b>Dimensioni dell'antenna TX:</b>		
<b>Size/ length of antenna :</b>	See photograph documentation	
<b>Designazione ITU :</b>		
<b>ITU Designation :</b>		
<b>Modalità operativa:</b>	Full duplex	DUPLEX SPACING
<b>Operating mode:</b>		
<b>Duty cycle:</b>	100%	
<b>Receiver input sensitivity</b>	-103 dBi	

Class of SRD equipment	Risk assessment of receiver performance
1	Highly reliable SRD communication media; e.g. serving human life inherent systems (may result in a physical risk to a person)
2	Medium reliable SRD communication media; e.g. causing inconvenience to persons, which cannot simply be overcome by other means
3	Standard reliable SRD communication media; e.g. inconvenience to persons, which can simply be overcome by other means (e.g. manual)

#### 1.4 Exclusion bands for devices

The frequencies on which Short Range Devices (SRD) are intended to operate, shall be excluded from the conducted and radiated RF immunity tests.

The frequencies on which the SRD transmitters are intended to operate shall be excluded from conducted and radiated emission measurements when performed in transmit mode of operation.

There shall be no frequency exclusion band applied to emission measurements of SRD receivers, and/or associated ancillary equipment.

The emission measurement and immunity test exclusions are referred to as "exclusion bands" and are defined in the clauses 4.3.1 and 4.3.2 of the present document.

#### Receiver and receivers of duplex transceivers exclusion band

Table 2: Exclusion bands for Short Range Devices

Operating Receiver Frequency $f_o$	EMC exclusion band for SRD equipment		
	Receiver Class 1	Receiver Class 2	Receiver Class 3
< 300 kHz	$f_o \pm 200$ kHz (see note 1)	$f_o \pm 300$ kHz (see note 1)	$f_o \pm 300$ kHz (see note 1)
300 kHz to < 30 MHz	$f_o \pm 2$ MHz (see note 1)	$f_o \pm 3$ MHz (see note 1)	$f_o \pm 5$ MHz (see note 1)
30 MHz to < 1 GHz	$f_o \pm 10$ MHz, or $\pm 2\% \times f_o$ , whichever is greater	$f_o \pm 15$ MHz, or $\pm 5\% \times f_o$ , whichever is greater	$f_o \pm 15$ MHz, or $10\% \times f_o$ whichever is greater
1 GHz to < 2 GHz	$f_o \pm 75$ MHz (see note 2)	$f_o \pm 100$ MHz (see note 2)	$f_o \pm 300$ MHz (see note 2)
NOTE 1:	Measurements shall not be carried out below 150 kHz.		
NOTE 2:	Operating frequencies above 2 GHz do not require an exclusion band as there are no immunity tests required above 2 GHz.		

#### 4.3.2 Exclusion band for transmitters

For transmitters operating, or intended to operate, in a channelized frequency band, the exclusion band is three times the maximum occupied bandwidth allowed for that service, centred around the operating frequency.

For wide band transmitters, i.e. transmitters in a non-channelized frequency band, the exclusion band is twice the intended operating frequency band centred around the centre frequency of the intended operating frequency band.

In case the receiver and transmitter are tested together as a system (see EN 301 489-1 [1], clause 4.2.5) the exclusion band defined for receivers or the exclusion band defined for transmitters shall be used, whichever is greater.

#### 1.5 Modifications incorporated in E.U.T.

The following items are the modifications introduced in the equipment under test :

- None

## 1.6 Ports identification

This section contains descriptions of all ports, the length and the type of the cable provided by manufacturer needed for the tests.

Moreover it is specified if the ports are ever or optionally connected.

Port	Description	Maximum length	Connection	Ancillaries / Modules / Support Equipment
1	Enclosure	Plastic and metallic case	----	Screws
2	AC power input/output ports	230 Vac 50Hz	----	----
3	DC power input/output ports	12Vdc internal battery	< 3 meter	Internal Connector
4	Signals Ports	Port Not present	----	----
5	Telec. Port	Port no present	----	----
Note: During the tests all cables must be what provided the manufacturer or the same that used in the real employment of the EUT.				

## 1.7 Auxiliary equipment

- none

### 1.8 Primary functions of the EUT

The following table describes the primary functions and the representative parameter of the equipment under test according the manufacturer specifications:

<b>Primary function</b>	<b>Representative parameter</b>
Microwave access control	Tx/Rx synchronization, access condition

### 1.9 Performance of equipment under test

With reference to the above specified primary functions, the following table defines the acceptable level of the performance or permissible loss of function and the observation mode for each representative parameter of the equipment under test according to the technical instructions by the manufacturer.

Representative parameter	Acceptable level of performance	Observation mode		
		Acquisition	Test equipment	Test n.
Maintenance of Tx/Rx synchronization	No loss of communication link.	Led synchronization status	operator by camera	All immunity tests
Access control	No false detection	Led colour status	operator by camera	

### 1.10 *Performance criteria*

#### **Performance criteria for Continuous phenomena applied to Transmitters (CT)**

For equipment of type I or II including ancillary equipment tested on a stand alone basis, the performance criteria A of the applicable class as given in clause 6.3 shall apply.

For equipment of type II or type III that requires a communication link that is maintained during the test, it shall be verified by appropriate means supplied by the manufacturer that the communication link is maintained during each individual exposure in the test sequence.

Where the EUT is a transmitter, tests shall be repeated with the EUT in standby mode to ensure that any unintentional transmission does not occur.

#### **Performance criteria for Transient phenomena applied to Transmitters (TT)**

For equipment of type I or II, including ancillary equipment tested on a stand alone basis, the performance criteria B of the applicable class as given in clause 6.3 shall apply, except for power interruptions exceeding a certain time the performance criteria deviations are specified in clause 7.2.2.

For equipment of type II or type III that requires a communication link that is maintained during the test, this shall be verified by appropriate means supplied by the manufacturer during each individual exposure in the test sequence.

Where the EUT is a transmitter, tests shall be repeated with the EUT in standby mode to ensure that any unintentional transmission does not occur.

#### **Performance criteria for Continuous phenomena applied to Receivers (CR)**

For equipment of type I or II, including ancillary equipment tested on a stand alone basis, the performance criteria A of the applicable class as given in clause 6.3 shall apply.

For equipment of type II or III that requires a communication link that is maintained during the test, it shall be verified by appropriate means supplied by the manufacturer that the communication link is maintained during each individual exposure in the test sequence.

Where the EUT is a transceiver, under no circumstances shall the transmitter operate unintentionally during the test.

#### **Performance criteria for Transient phenomena applied to Receivers (TR)**

For equipment of type I or II, including ancillary equipment tested on a stand alone basis, the performance criteria B of the applicable class as given in clause 6.3 shall apply, except for power interruptions exceeding a certain time the performance criteria deviations are specified in clause 7.2.2.

For equipment of type II or type III that requires a communication link that is maintained during the test, this shall be verified by appropriate means supplied by the manufacturer during each individual exposure in the test sequence.

Where the EUT is a transceiver, under no circumstances shall the transmitter operate unintentionally during the test.

#### **Performance criteria for ancillary equipment tested on a stand alone basis**

The provision of EN 301 489-1 [1], clause 6.4, shall apply.

## 2. Operating test modes and test conditions

The equipment has been tested according to the operative conditions described in the user/installation manual provided by the manufacturer and by following reference standards :

Reference European Standards:

- EN 301 489-1 V1.8.1 (2008) Electromagnetic compatibility and Radio spectrum Matters (ERM);  
ElectroMagnetic Compatibility (EMC) standard for radio equipment and services;  
Part 1: Common technical requirements
- EN 301 489-3 V1.4.1 (2002-08) Electromagnetic compatibility and Radio spectrum Matters (ERM);  
ElectroMagnetic Compatibility (EMC) standard for radio equipment and services;  
Part 3: Specific conditions for Short-Range Devices (SRD) operating on frequencies between 9 kHz and 40 GHz

In the following table there are the operating conditions adopted during tests identified by an indicator (#..) at which has been referred the item "Operating condition of the equipment under test" of all technical sheets of the tests (see Section 4)

<i>Operating condition</i>	<i>Description</i>
#1	Communication link between TX/RX component
#2	Stand-by mode

### 3. Summary of test results

#### 3.1 Emission tests

Phenomenon	Application	Basic standard	Operating condition	Test result
Radiated disturbance	Enclosure of ancillary equipment	EN 55022 (2006) + A1 (2007)	#1	Within the limit
Conducted emission	AC mains input/output port	EN 55022 (2006) + A1 (2007)	#1	Within the limit
	DC input/output port	EN 55022 (2006) + A1 (2007)	Not applicable: port no present	
	Telecommunication Port	EN 55022 (2006) + A1 (2007)	Not applicable: port no present	
Harmonic current emissions	AC mains input/output port	EN 61000-3-2 (2006)	Not applicable: power < 75W	
Voltage fluctuations and flicker	AC mains input/output port	EN 61000-3-3 (1994) + A1(1995)	#1	Within the limit

<sup>1</sup> Applicable to apparatus covered within the scope of IEC 61000-3-2, IEC 61000-3-3 or IEC 61000-3-12.

<sup>2</sup> Applicable only to switching operation in thermostatically controlled appliances

<sup>3</sup> Ref. Tab. of Section 2

### 3.2 Immunity tests

Port	Phenomena	Basic standard EN 50130-4	Operating condition	Result
1	Enclosure	EM radiated field, AM 80%	EN 61000-4-3 (2006)	#1 - #2 Within the limit
		Electrostatic Discharge (ESD)	EN 61000-4-2 (2001)	#1 - #2 Within the limit
2	AC mains	Fast transients	EN 61000-4-4 (2004)	#1 - #2 Within the limit
		RF common mode	EN 61000-4-6 (2005)	#1 - #2 Within the limit
		Surge	EN 61000-4-5 (2006)	#1 - #2 Within the limit
		Voltage dips/interruptions	EN 61000-4-11 (2004)	#1 - #2 Within the limit
3	DC power	Fast transients	EN 61000-4-4 (2004)	Not applicable: port no present
		RF common mode	EN 61000-4-6 (2005)	
		Surge	EN 61000-4-5 (2006)	
4	Transients and surges	DC power input ports (for 12V powered equipment)	ISO 7637-2 (2004)	Not applicable:
		DC power input ports (for 24V powered equipment)		
5	Signal / Control lines	Fast transients	EN 61000-4-4 (2004)	Not applicable: port no present
		RF common mode	EN 61000-4-6 (2005)	
		Surge	EN 61000-4-5 (2006)	
6	Telecomm unication port	Fast transients	EN 61000-4-4 (2004)	Not applicable: port no present
		RF common mode	EN 61000-4-6 (2005)	
		Surge	EN 61000-4-5 (2006)	

<sup>1</sup> Applicable only to apparatus containing devices susceptible to magnetic fields.

<sup>2</sup> Applicable only to input ports.

<sup>3</sup> Not applicable to input ports intended for connection to a battery or a rechargeable battery which must be removed or disconnected from the apparatus for recharging. Apparatus with a DC power input port intended for use with an AC-DC power adaptor shall be tested on the AC power input of the AC-DC power adaptor specified by the manufacturer or, where none is so specified, using a typical AC-DC power adaptor. DC ports, which are not intended to be connected to a DC distribution network are treated as signal ports.

<sup>4</sup> Not applicable to input ports intended for connection to a battery or a rechargeable battery which must be removed or disconnected from the apparatus for recharging. Apparatus with a DC power input port intended for use with an AC-DC power adaptor shall be tested on the AC power input of the AC-DC power adaptor specified by the manufacturer or, where none is so specified, using a typical AC-DC power adaptor. The test is applicable to DC power input ports intended to be connected permanently to cables longer than 3 m.

<sup>5</sup> Applicable only to ports interfacing with cables whose total length according to the manufacturer's functional spec. may exceed 3m

<sup>6</sup> Applicable only to ports interfacing with cables whose total length according to the manufacturer's functional spec. may exceed 30 m.

<sup>7</sup> Where normal functioning cannot be achieved because of the impact of the CDN on the EUT, this test is not required.

<sup>8</sup> Ref. Tab. of Section 2

## TEST RESULTS

### DIRECT CONTACT DISCHARGE (for conductive surfaces)

- Level : 2,4, 6 kV
- For each voltage and polarity, apply 10 discharges.
- Enter the number of times the system responded according to a level A, B or C.

TEST RESULTS		PERFORMANCE CRITERIA			NOTES
Discharge point	Pol.	WITHIN THE LIMIT		OUT OF LIMIT	
		A	B	C	
1   Screws	+	10			No performance degradation
	-	10			
2   Metallic Enclosure	+	10			No performance degradation
	-	10			

### DIRECT AIR DISCHARGE (for not conductive surfaces)

- Level : 4, 6, 8 kV
- For each voltage and polarity, apply 10 discharges.
- Enter the number of times the system responded according to a level A, B or C.

TEST RESULTS		PERFORMANCE CRITERIA			NOTES
Discharge point	Pol.	WITHIN THE LIMIT		OUT OF LIMIT	
		A	B	C	
3   Plastic enclosure top side	+	H			No performance degradation
	-	H			
4   Plastic enclosure front side	+	H			No performance degradation
	-	H			
4   Plastic enclosure rear side	+	H			No performance degradation
	-	H			

NOTES : H = HIGH IMPEDENCE SURFACE, ESD CANNOT BE REPRODUCED.

### INDIRECT DISCHARGE TO VCP (VERTICAL COUPLING PLANE)

- Level : 2, 4, 6kV
- For each voltage and polarity, apply 10 discharges.
- Enter the number of times the system responded according to a level A, B or C.

TEST RESULTS		Pol.	PERFORMANCE CRITERIA			NOTES
			WITHIN THE LIMIT		OUT OF LIMIT	
Discharge point			A	B	C	
5	Front side	+/-	10			No performance degradation
