DESCRIPTION

Power supply cannot be connected directly to the bus given the Bus 2 System features, since the power feed and data go through the same wires. The connection Modules is required for this.

The Power Supply connections Module must be connected directly to the bus with the shortest possible cable distance.

This module prevents the power supply from disturbing the operation of the rest of the signals circulating in the system and also lets you connect more power supplies if the system requires.

TECHNICAL SPECIFICATIONS

Input tension: 24 Vdc

Output current: 2A

Weight: 0,2503344 kg

Size of product when packed: 11,4x7,4x6,4 cm

EAN 13: 8424299032436
