DESCRIPTION

Required to install a VDS guard unit on an installation with outdoor panels. In the case of a video installation, use a coaxial cable. This module must not be used without this type of cable.

This module allows active devices to be selected and establishes the communication between them:

- Guard Unit<-->Apartment terminals.
- Guard Unit <-->Panel.
- Panels <-->Apartment terminals.

For installations without outdoor panels, the installation of the guard unit does not require a connection module.
