

KNX Gateway

- Gateway for integration with KNX system
- COMBO model with V-MAX BUS and F1
- Compatible with hybrid and radio control panels
- Plug&Play

Reference / Model	VESTA-419N / SMH-COMBO
Communication flexibility: Supports both via radio and BUS, allowing a versatile connection with different VESTA control panels.	
Integration gateway with KNX system via EIB port.	
Powered by BUS or 12V input	
Provides a variety of actions that allow changing modes, reporting panel status, activating programmed scenes and controlling specific devices	
Integration allows bi-directional communication between the VESTA security system and the KNX automation system:	
From VESTA to KNX: The VESTA control panel can report panel status (armed, disarmed and home armed) and alarm status, as well as a fully customizable signal for any use.	
From KNX to VESTA panel: The KNX system can trigger the arming/disarming of the VESTA panel and activate 1 predefined scene.	
Dimensions: 140 x 80 mm
