

Bus Transmitter for any typed of wired sensor.

- Bus Transmitter for any typed of wired sensor
- BUS connection to the detector and bus to Vesta panles
- The transmitter can be installed inside the detector

Reference / Model

VESTA-399 / UIM-1-BUS

The UIM-1-BUS is a universal interface module made for the connection of wired devices to the VESTAHybrid Panel alarm system, and provides it with power source.

By directly integrating with the external device, the UIM-1-BUS allows the connected device to employ the inputs with the alarm, tamper and anti-masking signals.

This product endows the devices without BUS terminals with convenience and flexibility, enhancing the versatility of the wired system.

Enable alarm, tamper, and anti-masking signal reporting for wired device

Enhance the versatility of the wired system.
